Mr. Salvatore Basile, IN.N.E.R. / GAOD, email: [salvatore.basile@gmail.com](mailto:salvatore.basile@gmail.com)

The 2<sup>nd</sup> Organic Districts World Congress (ODWC) 2024 has been designed to address the multifaceted challenges and opportunities within the global organic districts movement.

The congress's theme, "**One Health, One Planet**" necessitates a comprehensive exploration of various aspects of the organic districts.

To achieve this, the congress is structured around **eight core tracks**, according to the structure of the Work Groups mentioned in the IN.N.E.R. and GAOD Organic District Guidelines.

### **Track 1: Organic Districts' Integrated Management, Planning, Governance and Policies**

Objectives: support the Organic Districts in all the start-up, management and organization related activities involving the integration of the different dimensions of the Organic Districts (technical, environmental, social and economic). Focus areas are Organic Districts vision, organization structure, planning strategies, performance monitoring, private and public policies.

### **Track 2: Tourism – Gastronomy**

Objectives: support the Organic Districts in the development of activities related to the start-up, management and organization of activities of promotion of the territory in terms of its natural, historical and cultural heritage, including gastronomy. An efficient integration of tourism and gastronomy within the Organic Districts provides a much-needed support to valorize the multifunctional dimension of the farming activity and its integration with different actors of the community (touristic agencies, cultural associations, restaurant owners). This can provide an important contribution to the overall Organic Districts sustainable development, provide a better understanding and value of the work, quality and lifestyle in rural areas and inspire the re-population of these areas.

### **Track 3: Regenerative/Organic farming - Agroecology - Natural resources management and Energy production**

Objectives: support the Organic Districts in the development of activities related to the start-up, management and organization of different sustainable production models where the Regenerative/Organic farming – Agroecology go hand in hand with the strictly related Natural resources management and Energy production. This will provide a strong support for the Organic Districts in the sustainable supply of food, fiber and ecosystem services which represent the core of the activities.

### **Track 4: Food: Processing – Distribution- Consumption. Food and nutrition security quality and health**

Objectives: Support the Organic Districts in the development of activities related to the start-up, management and organization of activities supporting the different stages following the farming activity. The differentiation of the Organic District economic system, by adding sustainable and locally based Food Processing – Distribution-Consumption activities will contribute to the territorial economic development; the support to a sustainable model of agriculture and food production, provided by this WG, will also involve social and environmental benefits in terms of food quality and health for the communities and other external actors, such as tourists, consumers outside the Organic District.

### **Track 5: Social issues. Social agriculture - communities' enforcement - urban-rural relations**

Objectives: Support the Organic Districts in the development of activities related to the start-up, management and organization of activities related to the improvement of the social conditions of the Organic Districts Communities. This involves the strengthening of the community bonds, the creation of a virtuous cycle linking the urban and rural areas where the Organic District insist. By facilitating exchanges of ideas, experiences and

simply increasing the level of mutual knowledge among people living in urban and rural areas, a mutual benefit for the communities will be provided. Integrating socially fragile and marginalized people within inclusive Eco-Region communities is also another area of intervention this WG will consider in its activities.

Generally, Organic Districts are in rural areas and their main activities are related to agriculture. They supply the local population but also to the population living in cities. Seen in the perspective of the need for an integrated food system approach for healthy and environmentally friendly dietary patterns, this opens up for developing new rural-urban linkages to provide more and better jobs for youth in agriculture and food systems and in general, a potential for the revitalization of rural areas.

#### **Track 6: Communication**

Objectives: Collect, organize and distribute all the relevant information related to the Organic Districts activity with the aim of promoting their development in relation to the relevant stakeholders (public, private and civil society organizations) including the general public. Another relevant aspect related to this WG is the communication among the members of Eco-Regions not only supporting the management but increasing the awareness and pride of being part of an Eco-Regions. This plays an important role in increasing trust, collaboration and commitment within and Between the Eco-Regions communities. The WG communication plays a strategic role for the GAOD success.

#### **Track 7: Youth and organic agriculture (ref “Young Organics Global Network)**

Objectives: valorize the role of Young members as carriers of innovative ideas ensuring a sustainable and food-secure future. Provides GAOD updated info on new trends and available innovations.

#### **Track 8: Gender equity**

Objectives: promote gender equity within organic districts, ensuring equal opportunities and representation for all genders in all aspects of Organic District activities and governance.

**Registration by 28 June 2024**
